I was not thinking of a real estate type to present to council, but one we could talk to to learn the value of land I suspect it is not as simple as dividing the value of a lot by the square feet - are outer areas worth less than the core where one builds, or not?

But I love the idea of the analogy of the increase in rec fees - and many of the seniors are not on Panorama drive and to my knowledge did not get a far below market rate for years, when, without permission, they entered the NVD rec. facilities and used them without consent and probably knowing they were encroaching on the rec. facilities. Bill's analogy made be longer than we think!

Subject: Re: Agenda Item: Leasing of Public Land

Perhaps Bill's idea of comparing the encroachment values to something like seniors' fees for the Rec. Centres is a good avenue to take - something that Council can actually understand and relate to. The apply Corrie's comments - would be just great!!! - M.

Subject: Re: Agenda Item: Leasing of Public Land

John,

It might be difficult to get a "real estate type" to present to council -- after all, an encroacher might be in the market to sell their property one day, and who do you think would not want to be on the list of potential agents?

I think a very strong argument against the "unfairness" of a boost in encroachment fees can be made when one looks at the boost in recreational fees for seniors in the District. Read Ernie's e-mails. Most of these incroachers are paying less for the encroachment than a senior would pay to use the rec centres!

There is real value to the encroachments, for the encroachers and thus for the District. I have a neighbour who encroaches (free) by using a closed laneway, and has for years. Without the encroachment (which includes part of the garage), the value of the main property probably would drop by at least \$25,000 (from close to \$400,000). \$200, or even \$500 or more, a year for the encroachment would be a very good deal for the neighbour, amounting to less than \$50/month to maintain property value and provide excellent and secure parking. They would pay less to park at an apartment if they lived

in one!

Sure, some encroachers might scream hardship, but I think many would just suck it up and acknowledge they have had a pretty cheap ride for the past several years. They might even see their property taxes rise a little less, partly offsetting the increase.

Bill

- >> It appears that council as a body is not convinced that the current situation is a poor return for the use of district assets. Not only that, they are unwilling to remedy the situation for many years to come since it is now proposed that the current poor return (i.e. subsidy to those who have occupied public property) continue until the property is sold. To add some clarity to just how little money is paid to the district for return of occupying public property I have attached a graph (pdf) showing the annual rent vs the area encroached for all properties. Note that I have not included the Cascades/Woodlands access roads as they constitute a special case for which the encroached area is not provided.
- >>
- >> The bottom line is:
- >> An annual return of less than \$1 / sq-ft.

>>
